

Flexible Circular Copper Connector [Braid]

The DAR Flexible Circular Copper Connector Braid is a high-quality, versatile connector designed for optimal performance in electrical applications. Crafted from finely stranded copper wires, this connector offers superior flexibility, ensuring easy installation even in tight spaces. The copper material provides excellent conductivity, facilitating efficient power transmission. Ideal for grounding, bonding, and power connections, the DAR Flexible Circular Copper Connector Braid is a reliable choice for both industrial and commercial applications. Its durability and adaptability make it a valuable addition to any electrical system.
