

# DARWELD Welding Powder

Introducing DAR’s DARWELD Powder - a specialized copper alloy designed for optimal welding performance.

Our DARWELD powder is conveniently packaged in plastic tubes, with the weight varying based on the cross-sectional area of the conductors to be connected. Each tube is meticulously filled with a precise quantity of metal weld powder, ensuring the perfect amount for your desired connection.

In addition to the metal weld powder, each tube also contains a silver-colored starting powder. This unique composition guarantees a smooth and efficient welding process, reinforcing DAR’s commitment to quality and technical excellence.

| Code         | Powder weight (gm) | Material     | Starting Powder |
|--------------|--------------------|--------------|-----------------|
| DAR-W-90P10  | 90                 | Copper Alloy | 2 gm            |
| DAR-W-115P10 | 115                | Copper Alloy | 2 gm            |
| DAR-W-150P10 | 150                | Copper Alloy | 2 gm            |
| DAR-W-200P10 | 200                | Copper Alloy | 2 gm            |
| DAR-W-250P10 | 250                | Copper Alloy | 2 gm            |
